Subject: RE: Hope Iron and Metal Salvage Yard Assessment-ATSDR Health Consult Request

Hello Jennifer, can we set-up a call for early next week? I am in the office next week. I would like a simple letter on public health calculations for children in the consultation format. I might also need assistance in public outreach later once we get the green light to start the removal. If I can get the consult in January, then I can have my action memo submitted this month for consideration. Please let me know. Thanks-

Nic,

I forwarded your email to Ashley Whitlow at Arkansas Dept of Health. You can read her response below and see if this will work for you. I am happy to coordinate a call with both of you to discuss further. Thanks.

Jennifer

Jennifer,

Thanks for sending us this site information. It would be feasible for us to look closer at this site after December. We could have a conference call with Nick to see what is needed for this site (public health exposure calculations for child in letter health consultation format, community outreach or education materials, etc.) and find out the timeframe he had in mind. It would also be helpful to have the sample results in an Excel spreadsheet if EPA or Weston has that available. From our quick, initial review it appears contaminated soil is the only media involved.

Thanks,

Ashley

Ashley,

I have not gotten back to Nic yet. Thought I would see if this is a doable site for y'all. Once I hear

back from you, I will respond to Nic and we can get particulars, like timeframe, etc.
Jennifer

Subject: Hope Iron and Metal Salvage Yard Assesment-ATSDR Health Consult Request

Hello Jennifer, I need to get an ATSDR consult on a removal assessment I just completed. The site is an old abandoned salvage yard in Hope, Arkansas. It is roughly 2 acres in size, and the soil has elevated lead and PCB levels throughout the property from surface to four feet below ground surface. Elevated levels of cadmium and SVOCs are also on the property. A family currently lives on the property which includes a 10 year old boy. The property is currently fenced with a gate. The property is in a residential area and is surround by homes. For assessment purposes, I am planning to conduct a removal in the Spring using residential risk screening levels (RSLs). Please take a look at the attached Removal Assessment Report and associated Figures and analytical data and let me know what else you need to complete a consultation for me. The exceedances on the data table are shown in yellow. I will use your consultation to support the Action Memo. Thanks-
